### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach in combination as claimed an electric current detection circuit in an induction-heating device detecting an electric current including a buffer. A diode configured to detect a peak value of an input current, the diode comprising an anode connected to a secondary winding of a current transformer at an input side of the circuit and a cathode connected to the buffer at an output side of the circuit. Capacitor having one end connected to the cathode of the diode and the other end connected to a ground potential and configured to output a detected peak value of the input current via the buffer at the secondary winding of the current transformer. A zener diode connected between the diode and the buffer, said zener diode comprising a cathode connected to both the cathode of the diode and an input terminal of the buffer, and an anode connected to a ground potential. A control apparatus configured to compare a target value with the detected peak value outputted via the buffer and control a current applied to the coil of induction heating device according to a result of the comparing.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

**Prior Art Made of Record**

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

A. Reiss et al. (US Patent No. 6,710,314) discloses a method and apparatus for measuring current in an induction-heating tool.

The closest prior art fails to anticipate or render Applicant's limitations above obvious.
